

Email and Web Hosting

Advanced email features include server-side anti-virus protection, no email transmission restrictions (large files won't prevent delivery), on-line mailbox administration, anytime access to email using a web interface, unlimited aliasing, forwarding, and mailing lists.

Web hosting services offer the same robustness and reliability as the email services. Easily manage your website using a browser interface. Get vital marketing and site performance information with live web statistics.

Managed Co-Location and Dedicated Hosting

Extremely competitive pricing offers the lowest total cost of ownership, and a fast return on investment. By combining redundant locations and connectivity links, a premium-grade data center, and backup power with ZeroFall™ remote monitoring, clients get the ultimate in reliability.

ZeroFall™ Remote Monitoring

The ZeroFall™ centralized model makes implementation quick and effortless for all IT services. The simple web-based interface offers "at a glance" network status. Predefined and customizable reports provide all the information you need, without having to know how to measure, extract, and analyze data.

À la carte Consulting

How efficient is your IT infrastructure? What is your backup strategy? If your network fails, how long do you wait to become operational again? How secure is the data on your network? Does your staff use your IT infrastructure efficiently?

We can answer these questions with our Assessment, Contingency Planning, IT security and Internal Audit consulting packages.

Partnership Improves Key Customer Services

In a relentless effort to help customers, Sprint Canada partners with Pre2Post Technologies to improve services and reliability!

Sprint Canada is joining forces with Pre2Post Technologies to improve customer offerings and to complement current services. The partnership provides higher-level managed services by offering clients expanded integration solutions. This means enterprise products are more reliable and simpler to use, with better overall performance, resulting in improved efficiency and reduced costs. The two companies have been working closely together since May of 2002, producing phenomenal results for several existing customers. The partnership has both companies looking forward to offering these services to all Sprint Canada clients.

Named one of the 25 Top Independent Canadian "Up & Comer" IT Companies in the April 2003 issue of the *National Post Business Magazine*, Pre2Post has served public and private sector corporations since 1996 with one of the most robust network infrastructures in the industry.

Pre2Post Technologies positions itself at the leading edge of IT management with innovative products, such as the ZeroFall™ product suite, the backbone for all their services. These remote monitoring tools detect, analyze, and report anomalies and performance parameters. The technical staff receives instant notification of impending issues, offering an opportunity to implement preventive measures to avoid any downtime. This revolutionary shift, from a reactive to a proactive approach, means stable, reliable, and always-on IT operations.

Please do not hesitate to contact your Sprint Canada experienced consultant for any additional information or to discover and understand how these new tools will give you the edge to outrun your competitors.

What they are saying about Pre2Post Technologies:

" Pre2Post's professionalism has been a joy to work with and we look forward to continuing this relationship. We are completely satisfied and would gladly recommend their services."
